

## MEASURING FOR TRAVEL CARRIER FIT

Our Pet Travel Carriers are designed to carry smaller pets.

Pet Carriers allow you to take your pet with you to inconvenient places or where they normally would not be allowed. And they can make vet visits much easier to maneuver.

As a general guideline, your pet should be able to stand comfortably in the carrier, turn around easily, and lie down without difficulty.

Therefore, please measure your pet to ensure the right size carrier.

1. **Length** – measure from the neck where the collar rests to the base of the tail. Add 2-3 inches to determine the carrier's long measurement.
2. **Shoulder Height** – measure from the ground to the top of shoulders. Add 2-3 inches to shoulder height

Weight should be used as a guideline only – the actual size of your pet is most critical.
